SUMMARY

Computer Engineering graduate from Chulalongkorn University and former contract software developer at Agoda, where I worked on the frontend monorepo powering 10+ teams — CI/CD, tooling, testing and deployment. I build full-stack web and mobile apps with TypeScript/React, Go and Flutter. Open to software engineer roles.

SKILLS

- **Languages:** TypeScript, JavaScript, Python, Go, Dart, SQL, C, C++, HTML, CSS
- **Frontend:** React, Next.js, React Native (Expo), Flutter, Redux, Zustand, Riverpod, Tailwind CSS, MUI, Framer Motion
- **Backend:** Go, Node.js, Express, GraphQL (gqlgen), REST APIs
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis
- **DevOps & Infra:** Docker, docker-compose, GitHub Actions, GitLab CI/CD, Vercel, Cloudflare Workers, Nx
- **Testing:** Jest, Go unit & integration testing, SQL migrations
- **Spoken:** Thai (native), English (professional working proficiency)

EXPERIENCE

Contract Software Developer — **Agoda** — *Bangkok, Thailand* — **08/2025 - 08/2026**

- Maintained and evolved the company's large-scale frontend monorepo used by 10+ product teams, covering CI/CD pipeline health, monorepo structure and build tooling.
- Improved CI reliability and build performance across the monorepo, reducing friction in day-to-day development for contributing teams.
- Shaped the integration-testing and CI strategy for shared frontend code, making releases safer and more consistent across teams.
- Built internal tooling and workflow improvements that streamlined the local and CI developer experience.

Software Engineer Intern — **Gosoft (Thailand)** — *Bangkok, Thailand* — **06/2024 - 07/2024**

- Designed and developed web application features on both front-end and back-end with the engineering team under an Agile workflow.

EDUCATION

B.Eng. Computer Engineering — **Chulalongkorn University** — *Bangkok, Thailand* — **08/2021 - 05/2025**

PROJECTS

EatRai — Restaurant finder with a swipe-deck UI — 2026

- **React Native (Expo) + web app over a stateless Go (chi) proxy on the Google Places API.**
- Built a gesture-driven swipe deck with React Native Gesture Handler and Reanimated, with session state and on-device persistence in Zustand.
- Shipped web and mobile from one TypeScript codebase via react-native-web, deployed on Vercel with SEO metadata.
- Wrote the Go backend with chi routing, an in-memory TTL cache, IP rate limiting and a server-side API-key/CORS gate.
- Set up testing with Jest / React Native Testing Library and Go httptest, running in GitHub Actions CI.
- **Live**: *eatrai.help*
- **Code**: *github.com/MisterStank/EatRai*

Gymon — Workout tracker with a virtual companion — 2026

- **Flutter client, Go/GraphQL backend, PostgreSQL, Redis.**
- Built a GraphQL API in Go (gqlgen) with 20+ versioned SQL migrations, containerized via docker-compose and covered by integration and auth test suites.
- Set up three GitHub Actions pipelines (API, web, mobile) and deployed the web build to Cloudflare Workers.
- Implemented offline-first workout logging and adaptive program generation in a Flutter/Riverpod client.
- **Live**: *gymon-web.chakkritchongkraichak.workers.dev*
- **Code**: *github.com/MisterStank/WorkoutTracker*

Products Store — Simple Full-stack PERN catalogue — 2025

- **PostgreSQL, Express, React and Node.js**
- CRUD product catalogue with image handling and a REST API on PostgreSQL, Express, React and Node.js.
- **Live**: *m-product-store.onrender.com*
- **Code:** *github.com/MisterStank/product-store-pern*
